Qualifiers and Definitions

E	Estimated concentration, outside calibration range
J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
P	Duplicate analysis does not meet the acceptance criteria for precision
S	Surrogate recovery was outside acceptance criteria
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1018, 1021, 1232, 1248, 1254, 1260, 1262, and 1268.

 Submitted To: **Jake White**

Date Issued: **10/10/2018 4:26:32PM**

Sample Conditions Checklist

Sample Received at	LAPC
Has any sample been?	YES/Quota
How Cooling from soil? If so, what has received heat?	No
Are the correct preservation methods completed and recorded?	No
Do all bottle labels agree with custody papers?	No
Is the temperature blank or representative sample within acceptable limits? (allows freezing to 5°C or less) or not on ice and recently later?	No
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8211, EPA8204, EPA8200, EPA8204, EPA8215 GRO, EPA8021, EPA8204, and R50-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Trip Blank Data/Time (9-11-18 9:20) was taken from the sample container labels.
 RLC 9-26-18.

Enclosed are the results of analyses for samples received by the laboratory on 09/27/2018 15:20. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Coyne
Laboratory Manager

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as required by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfate that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are data as at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

E	Estimated concentration, outside calibration range
J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
P	Duplicate analysis does not meet the acceptance criteria for precision
S	Surrogate recovery was outside acceptance criteria
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLGD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1018, 1021, 1252, 1248, 1254, 1260, 1262, and 1268.

Certificate of Analysis

Client Name: **LaBella Associates, D.P.C.**
 Client Site I.D.: **Laurel Valley Center Sanitary Landfill**
 Submitted To: **Jake White**

Date Issued: **10/10/2018 4:24:58PM**

Sample Conditions Checklist

Sample Received at	L.V.P.
Has any sample been?	YES/Checked
Were cooling/freezers used? If so, were they verified used?	No
Are the correct preservation techniques used?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature/level of refrigeration/cooling appropriate? (above freezing for VOC or verified on ice and recently later?)	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? (VOC sample sets include EPA8011, EPA804, EPA806, EPA804, EPA815 GR0, EPA8021, EPA804, and R04-175)	Yes
Are all samples received appropriately preserved? (Note that metals containers do not require field preservation but lab preservation may delay analysis)	Yes

Work Order Comments

For trip blank data, see work order 181076, DWS 10/1/18 1343

Client Site I.D.: Laurel Valley Sanitary Landfill (Culpeper)

Enclosed are the results of analyses for samples received by the laboratory on 04/03/2019 13:52. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Mandy Mishra
Lab Director/Quality Assurance Manager

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as required by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done as at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

J	The reported result is an estimated value.
M	Matrix spike recovery is outside established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLDD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1264, 1268, 1282, and 1288.

Certificate of Analysis

Client Name: LaBella Associates, D.P.C.
 Client Site I.D.: Laurel Valley Sanitary Landfill (Cupeper)
 Submitted To: Jake White

Date Issued: 4/16/2019 5:01:13PM

Sample Conditions Checklist

Sample Received at	4/16/19
Was area sampled isolated?	Yes
Were fumes from soil? If so, were they removed first?	No
Are the correct forms filled out completely and correctly?	Yes
Do all labels match copies with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits as required on box, and correctly labeled?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8211, EPA8204, EPA8200, EPA8204, EPA8215 GR0, EPA8221, EPA8204, and R04-175.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but lab preservation may delay analysis.	Yes

For the Trip Blank see 19D0177-03. BAR 04/03/19 1518

Enclosed are the results of analyses for samples received by the laboratory on 04/03/2019 13:52. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Mandy Mishra
Lab Director/Quality Assurance Manager

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as required by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done as at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

J	The reported result is an estimated value.
M	Matrix spike recovery is outside established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLDD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1264, 1268, 1282, and 1288.

Certificate of Analysis

Client Name: LaBella Associates, D.P.C.
 Client Site I.D.: Laurel Valley Sanitary Landfill (Cupeper)
 Submitted To: Jake White

Date Issued: 4/16/2019 5:01:13PM

Sample Conditions Checklist

Sample Received at	4/16/19
Was area sampled isolated?	Yes
Were fumes from soil? If so, were they removed first?	No
Are the correct forms filled out completely and correctly?	Yes
Do all labels match copies with custody papers?	Yes
Is the temperature blank or representative sample when available? Is it or required to be, and correctly labeled?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8211, EPA8204, EPA8200, EPA8204, EPA8215 GR0, EPA8221, EPA8204, and R04-175.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but lab preservation may delay analysis.	Yes

For the Trip Blank see 19D0177-03. BAR 04/03/19 1518

Enclosed are the results of analyses for samples received by the laboratory on 04/03/2019 13:52. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Mandy Mahra
Lab Director/Quality Assurance Manager

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are shown as at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

- J The reported result is an estimated value.
- M Matrix spike recovery is outside established acceptance limits

- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- LOD Limit of Detection
- BLDD Below Limit of Detection
- LOQ Limit of Quantitation
- DF Dilution Factor
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
- PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1264, 1268, 1282, and 1288.

Sample Conditions Checklist

Sample Received at	4/9/19
Was area sampled marked?	Yes
Were labels from each? If so, were they numbered consecutively?	Yes
Are the correct labels from all containers and provided?	Yes
Do all labels clearly agree with custody papers?	Yes
Is the temperature listed on representative samples within acceptable limits as required on box and security label?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analytes requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8211, EPA8204, EPA8200, EPA8204, EPA8215 GR0, EPA8221, EPA8204, and R04-175.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but lab preservation may delay analysis.	Yes

For the Trip Blank see 19D0177-03. BAR 04/03/19 1518

Enclosed are the results of analyses for samples received by the laboratory on 04/03/2019 13:52. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Mandy Mahra
Lab Director/Quality Assurance Manager

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are shown as at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

- C Continuing calibration verification response for this analyte is outside specifications.
- Cl Residual Chlorine or other oxidizing agent was detected in the container used to analyze this sample.
- E Estimated concentration, outside calibration range
- J The reported result is an estimated value.
- L LCS recovery is outside of established acceptance limits
- M Matrix spike recovery is outside established acceptance limits
- P Duplicate analysis does not meet the acceptance criteria for precision
- S Surrogate recovery was outside acceptance criteria

- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- LOD Limit of Detection
- BLDD Below Limit of Detection
- LOQ Limit of Quantitation
- DF Dilution Factor
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

- PCBs, Total Total PCBs are defined as the sum of detected Analytes 1016, 1021, 1022, 1048, 1054, 1060, 1062, and 1068.

Sample Conditions Checklist

Sample Received at	4:07P
Was your sampler trained?	Yes
Were tubing from used? If so, were they cleaned first?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottles/labels agree with custody papers?	Yes
Is the temperature listed on representative samples within acceptable limits as required on law, and correctly listed?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analytes requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8211, EPA8204, EPA8200, EPA8204, EPA8215 GR0, EPA821, EPA824, and R04-175.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but lab preservation may delay analysis.	Yes

Work Order Comments

Refer to WO 1800177 for trip blank data. SE 4/3/19 15:58

There are no reportable results for target analytes in this report.

Note that this report is not the "Certificate of Analysis". This report only lists the target analytes that displayed concentrations that exceeded the detection limit specified for that analyte. For a complete listing of all analytes requested and the results of the analysis see the "Certificate of Analysis".

Client Site I.D.: Laurel Valley Center Sanitary Landfill (Culpeper)

Enclosed are the results of analyses for samples received by the laboratory on 04/03/2019 12:52. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Mandy Mahra

Lab Director/Quality Assurance Manager

End Notes

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are shown as at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

- C Continuing calibration verification response for this analyte is outside specifications.
- E Estimated concentration, outside calibration range
- J The reported result is an estimated value.
- L LCS recovery is outside of established acceptance limits
- M Matrix spike recovery is outside established acceptance limits
- P Duplicate analysis does not meet the acceptance criteria for precision
- S Surrogate recovery was outside acceptance criteria

RPD Relative Percent Difference

Qual Qualifier

-RE Denotes sample was re-analyzed

LOD Limit of Detection

BLOD Below Limit of Detection

LOQ Limit of Quantitation

DF Dilution Factor

TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the publisher pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total Total PCBs are defined as the sum of detected Anomers 1016, 1021, 1032, 1048, 1054, 1066, 1082, and 1098.

Certificate of Analysis

Client Name: **LaBella Associates, D.P.C.**
 Client Site I.D.: **Laurel Valley Center Sanitary Landfill (Cupeper)**
 Submitted To: **Jake White**

Date Issued: **4/16/2019 4:54:45PM**

Sample Conditions Checklist

Sample Received at	4/16/19
Was area sampled isolated?	Yes
Were fumes from work? If so, were they removed first?	No
Are the correct labels filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature listed on representative samples within acceptable limits as required on box, and security label?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analytes requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8211, EPA8204, EPA8200, EPA8204, EPA8215 GR0, EPA8221, EPA8204, and R04-175.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but lab preservation may delay analysis.	Yes

There are no reportable results for target analytes in this report.

Note that this report is not the "Certificate of Analysis". This report only lists the target analytes that displayed concentrations that exceeded the detection limit specified for that analyte. For a complete listing of all analytes requested and the results of the analysis see the "Certificate of Analysis".

Enclosed are the results of analyses for samples received by the laboratory on 04/26/2019 13:36. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars
Laboratory Manager

End Notes

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been qualified for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Summary of Data-Qualifiers

- RPD Relative Percent Difference
- Qual Qualifiers
- R- Denotes sample was re-analyzed
- DF Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
- TC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TC spectral match is reported when the pattern is at least 70% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCNs, Total Total PCNs are defined as the sum of reported hexanes (10-16), 1201, 1202, 1248, 1254, 1260, 1262, and 1268.

Certificate of Analysis Final Report

Client Name:	Lafelle Associates, D.P.C. 1604 Chenby Lane Richmond VA, 23225	Date Issued:	5/12/09 16:33
Submitted To:	Jake White	Project Number:	2181930
Client Date I.D.:	Cuppaper	Purchase Order:	

Sample Conditions Checklist

Samples Received at:	S.F.P.C.
Were any samples returned?	AMS Courier
Were labels fully readable? (Yes, some may be unreadable)	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle seals agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	No
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

No trip blank received. Jake White notified via email. SE 4/26/09 14:18

End Notes

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, conductance and turbidity that are performed in the laboratory do not meet NELAP requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are shown so at the client's request and are not included in the laboratory's scope of certification nor have they been verified for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAP standards unless otherwise specified. For a complete list of the Laboratory's NELAP certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Ac Water & Soil Laboratories, Inc.

Qualifiers and Definitions

C	Continuing calibration verification response for this analyte is outside specifications.
J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
S	Surrogate recovery was outside acceptance criteria
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TK:	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TK spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Submitted To: Michele Clary

Date Issued: 11/5/2019 3:39:34PM

Trip Blank date and time (3 Oct 2019 09:24) as per bottle label.

Samples logged for Total Methane RDX 75.

Michele Clary notified by email.

THM 17 Oct 2019 17:14

As per Michele Clary: Samples to be analyzed for Total Methane RDX 75, THM 22
Oct 2019 09

Certificate of Analysis

Client Name: Golden Associates, Inc.
Client Site I.D.: Laurel Valley Corrective Action Wells
Submitted To: Michele Clary

Date Issued: 11/5/2019 3:39:34PM

Sample Conditions Checklist

Sample Received at	DATE
Were any samples received?	NO/None
Were custody seals used? If so, were they removed intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature check on representative samples within acceptable limits or preserved in ice, and securely sealed?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA824, EPA826, EPA824, EPA825 (GH), EPA825, EPA824, and RSC 1/5.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but field preservation may delay analysis.	Yes

Work Sheet Comments

Trip Blanks logged as per sample container label (10/2/19 15:10). Michele Clary notified via email. KMC 10/18/19 09:17

Sample Conditions Checklist

Sample Received at	CLP:
Were all samples received?	All Issues
Were custody tags used? For air, were they received intact?	Yes
Was the custody paper filled out completely and correctly?	No
Are all bottle labels agree with custody papers?	No
Is the impregnation blank or representative sample with acceptable levels of preservatives, and correctly labeled?	No
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA824, EPA8260, EPA824, EPA8261 (2H), EPA8271, EPA828, and ROR 1/5.	Yes
Are all samples received appropriately preserved? Note that metal containers do not require field preservation but field preservation may delay analysis.	Yes

Work Scope Comments

Date and times for CLF-15A and CLF-50 logged as per sample container label.
Michele Clary notified via phone.

No trip blank received. Michele Clary notified via email. SE 10/18/19 1500

Ted Soyars

Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

E	Estimated concentration, outside calibration range
J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
P	Duplicate analysis does not meet the acceptance criteria for precision
S	Surrogate recovery was outside acceptance criteria
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	5.50°C
How were samples received?	AWS Courier
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	No
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Enclosed are the results of analyses for samples received by the laboratory on 11/22/2019 14:12. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars
Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Enclosed are the results of analyses for samples received by the laboratory on 04/30/2020 16:14. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars
Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

- B Blank contamination. The recorded result is associated with a contaminated blank.
- C Continuing calibration verification response for this analyte is outside specifications.
- Cl Residual Chlorine or other oxidizing agent was detected in the container used to analyze this sample.
- J The reported result is an estimated value.
- L LCS recovery is outside of established acceptance limits
- M Matrix spike recovery is outside established acceptance limits
- S Surrogate recovery was outside acceptance criteria
- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- LOD Limit of Detection
- BLOD Below Limit of Detection
- LOQ Limit of Quantitation
- DF Dilution Factor
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
- PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	2.90°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	No
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Work Order Comments

Trip Blank date and time (13 April 2020/13.30) as per bottle label. THM 1 May 2020/13.36

Enclosed are the results of analyses for samples received by the laboratory on 04/30/2020 16:14. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars
Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Qualifiers and Definitions

J	The reported result is an estimated value.
L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
LOD	Limit of Detection
BLOD	Below Limit of Detection
LOQ	Limit of Quantitation
DF	Dilution Factor
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	2.90°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	No
Do all bottle labels agree with custody papers?	No
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Sample container labels for samples CLF-1 and CLF-S1 list sample collection times as 11:25 (CLF), and 10:10 (CLF-S1). COC lists times as 10:10 (CLF), and 11:25 (CLF-S1). Logged per COC, Michele Clary notified via email. GMC 05/01/2020 12:00

Sample collection times updated to match sample container labels per Michele Clary via email. GMC 05/01/2020 12:19

Trip Blank date and time (13 Apr 2020/13.30) as per the bottle label. THM 1 May 2020/12.54

As per Michele Clary, CLF-1 was collected in container labeled as CLF-S1 at 1010 and CLF-S1 was collected in CLF-1 container at 1125. SWS 5/1/20

Enclosed are the results of analyses for samples received by the laboratory on 05/18/2020 16:03. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars
Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

DF Dilution Factor

TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	9.40°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	No
Are all volatile organic and TOX containers free of headspace?	NA
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	NA
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

COMMONWEALTH OF VIRGINIA
 DEPARTMENT OF GENERAL SERVICES
 DIVISION OF CONSOLIDATED LABORATORY SERVICES

Certifies that

VA Laboratory ID#: 460024
 Air Water & Soil Laboratories, Inc.
 1941 Reynard Road
 Richmond VA 23237

is duly qualified to perform the following
 environmental laboratory services:

Having met the requirements of 16VAC 104-5-401
 being deemed to be compliant with the 2003 VA Standards approved by the VA AC Institute
 is hereby approved as an

Accredited Environmental Laboratory

as shown by reference to the Virginia Board of Accreditation

Effective Date: September 16, 2024

Expiration Date: June 14, 2027

License #: 11664

Conditions and limitations of this approval are contained in the approved Virginia Environmental Laboratory Accreditation Standards
 as published by the Department of General Services, Division of Consolidated Laboratory Services
 and are available to the public on the Department of General Services Environmental Laboratory Accreditation Website: www.dgs.gov
 Office of Regulatory Affairs
 Department of General Services, 100 North 17th Street, Richmond, VA 23219
