3. PROJECT SPECIFIC NOTES AND SCOPE OF WORK (SOW)

3.1. THE PROJECT SCOPE FOR THE POOL PROJECT IS AS SHOWN AND NOTED ON THE DRAWINGS AND THE SPECIFICATIONS AND GENERALLY INCLUDES:

3.1.1. THE SEASONAL POOL STRUCTURE(S) CONSISTING OF LAP, LEISURE/WATER PLAY/TODDLER AREAS, AND SPLASH PAD
3.1.2. THE BATH-HOUSE INCLUDING LOCKERS, RESTROOMS, AND SHOWER FACILITIES, FOOD SERVICE, MANAGEMENT OFFICE(S), CONTROLLED ENTRY, POOL FILTER AND PUMP ROOM(S)
3.1.3. ASSOCIATED SUPPORT STRUCTURES/WORK INCLUDING PAVILIONS, LANDSCAPING AND SIGNAGE, HARDSCAPE, THE FENCE AND GATES, SITE UTILITIES AND GRADING WITH SWM FACILITIES AND CURB/GUTTER AND SIDEWALK WORK.

3.2. THE COUNTY IS ALSO SOLICITING A SEPARATE BID FOR THE PARKING LOT PROJECT ACROSS COMPETITION DRIVE FROM THIS PROJECT SITE. THE COUNTY WILL BID THE PARKING LOT AND POOL PROJECT SEPARATELY.

3.3. THE SWM WORK SHOWN ON THE CIVIL DRAWINGS IS APPLICABLE TO, REQUIRED FOR AND ASSIGNABLE TO BOTH THE PARKING PROJECT WORK AND THE POOL PROJECT.

3.4. THE POOL PROJECT REQUIRES NEW CONCRETE SIDEWALK ON THE NORTH SIDE OF COMPETITION DRIVE AND WILL ALSO REQUIRE UTILITY WORK ON THE NORTH PORTION OF COMPETITION DRIVE AND OTHER UTILITY WORK IN CLOSE PROXIMITY TO THAT AREA.

3.5. THEREFORE, BECAUSE BOTH PROJECTS ARE IN CLOSE PROXIMITY TO ONE ANOTHER AND THE SWM WORK IS APPLICABLE TO BOTH PROJECTS, THIS SOW NARRATIVE NOTES THE EXTENT AND SCOPE AND SPECIFICALLY THE DEMARCATION LINE BETWEEN FOR THE SOW OF BOTH PROJECTS.

3.6. ALL OF THE SWM WORK SHOWN AND NOTED SHALL BE WITHIN THE SOW OF THE POOL PROJECT AND SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR/SITE SUBCONTRACTOR FOR THAT PROJECT. AFTER SELECTION OF THE QUALIFIED LOW BIDDER FOR THE POOL PROJECT, THE COUNTY WILL ENTER INTO DISCUSSIONS WITH THAT CONTRACTOR AND WILL AGREE TO A PRO-RATA DOLLAR AMOUNT BASED ON AN AREA OR OTHER AGREED UPON CALCULATION BASIS FOR THE SWM WORK THAT IS THEN ASSIGNABLE TO THE PARKING LOT PROJECT. THE COUNTY WILL THEN MAKE ARRANGEMENTS TO IT'S BUDGETING PROCESS TO ASSIGN THOSE MONIES TO THE POOL PROJECT; THE METHOD OF ASSIGNMENT SHALL BE DETERMINED AT THE SOLE DISCRETION OF THE COUNTY.

3.7. PLEASE REVIEW THE CIVIL AND ANY APPLICABLE ARCHITECTURAL SITE/UTILITY PLANS FOR A GRAPHIC DEMARCATION LINE THAT INDICATES WHERE THE POOL PROJECT SOW ENDS AND THE PARKING LOT PROJECT BEGINS. SPECIFICALLY, THE SIDEWALK TO THE NORTH OF COMPETITION DRIVE AND THE CURB AND GUTTER WORK AND UTILITY WORK SHALL BE ASSIGNABLE TO THE POOL PROJECT AND ALSO ANY WORK IN COMPETITION DRIVE THAT IS NORTH OF A DEMARCATION LINE LOCATED 30" SOUTH OF THE NOTED WATER UTILITY LINE WORK, EXCEPT AS OTHERWISE NOTED BELOW. ANY WORK EXTENDING SOUTH OF THAT DEMARCATION LINE AND INCLUDING FINAL ROAD RE-SURFACING OF THE ENTIRE SURFACE OF COMPETITION DRIVE SHALL BE ASSIGNABLE TO AND THE RESPONSIBILITY OF THE CONTRACTOR FOR THE PARKING LOT PROJECT. HOWEVER, THE POOL PROJECT SHALL BE RESPONSIBLE FOR TEMPORARY BACKFILL, COMPACTION AND REPAIR OF THE TRENCH BUT NOT THE FINAL ROAD RE-SURFACING.

3.8. THE OWNER RESERVES THE RIGHT TO REMOVE THE LANDSCAPE WORK FROM THE PROJECT SCOPE.

3.9. ALSO SEE THE IFB AND OTHER INFORMATION REGARDING THE ADJACENT PARKING LOT WORK

      iii. SHEETS WITHIN THE DRAWING SET THAT HAVE TEXT-BASED SCHEDULES ALSO SHOW THE REBID REVISIONS IN A SIMILAR MANNER. IN ORDER TO ALIGN GRAPHICS WITH CHANGES IN THE TEXT-DRIVEN PROJECT MANUAL, REVISIONS ON TEXT WITHIN THE DRAWINGS ARE SHOWN IN STRIKE-THRU AND NEW TEXT IS SHOWN IN ITALICS. INDIVIDUAL TEXT REVISIONS ARE NOT CLOUDED.
   d. PREVIOUSLY, THE PROJECT WAS BID AS ONE PROJECT WITH THE POOL AND THE BUILDING AND GROUNDS BID TOGETHER. FOR THIS REBID, THE COUNTY HAS REQUESTED THAT THE WORK OF THE PROJECT BE SPLIT INTO TWO IFBs, ONE FOR THE POOL AND ONE FOR THE BUILDING AND GROUNDS AS NOTED BELOW. THE DRAWINGS HAVE NOT BEEN SEPARATED INTO TWO SEPARATE SETS. POOL BIDDERS SHOULD LOOK AT THE AP SERIES OF DRAWINGS AND THE ASSOCIATED POOL SPECIFICATION SECTIONS FOR INFORMATION ABOUT THE POOL CONSTRUCTION. BIDDERS FOR THE BUILDING AND GROUNDS SHOULD REVIEW THE BALANCE OF THE SET INCLUDING THE A SERIES DRAWINGS AND THE S, MEP AND C SERIES DRAWINGS
   e. ONE IFB WILL BE FOR THE POOL WORK EXCLUSIVELY, INCLUDING THE POOL ITSELF, THE PIPING, EQUIPMENT AND THE ASSOCIATED CONNECTIONS TO BE PROVIDED BY THE POOL SUBCONTRACTOR.
      i. IT IS ASSUMED THAT THE POOL CONTRACTOR WILL PROVIDE EXCAVATION FOR THE LEISURE/LAP POOL AND SPLASHPAD. THE EXCAVATION EXCESS MATERIALS SHALL BE NOTED BY QUANTITY AND AS A UNIT PRICE PER THE IFB AND SHALL ASSUME REMOVAL, TRANSPORTATION TO AND DISTRIBUTION AT AN APPROVED SITE.
      ii. THE AE TEAM ESTIMATES THAT THERE WILL BE AN APPROXIMATE TOTAL OF 415 CY OF EXCESS MATERIALS COMBINED FOR **BOTH** THE POOL AND BUILDING WORK. THIS IS NOT A GUARANTEE OF QUANTITIES AND IT IS THE BIDDERS RESPONSIBILITY TO PROVIDE THEIR OWN QUANTITY AMOUNT.
   f. THE OTHER IFB WILL BE FOR THE BUILDING AND GROUNDS AND WILL INCLUDE THE FOLLOWING:
      i. THE BUILDING
      ii. EXCAVATION FOR THE BUILDING FOUNDATION, PAVILION FOUNDATIONS AND GRUBBING/EXCAVATION FOR THE HARDSCAPE AND ASSOCIATED CONSTRUCTION. DISTRIBUTION AND/OR REMOVAL OF THE EXCAVATION EXCESS MATERIALS SHALL BE NOTED BY QUANTITY AND AS A UNIT PRICE PER THE IFB AND SHALL ASSUME REMOVAL, TRANSPORTATION TO AND DISTRIBUTION AT AN APPROVED SITE.
      iii. THE AE TEAM ESTIMATES THAT THERE WILL BE AN APPROXIMATE TOTAL OF 415 CY OF EXCESS MATERIALS COMBINED FOR **BOTH** THE POOL AND BUILDING WORK. THIS IS NOT A GUARANTEE OF QUANTITIES AND IT IS THE BIDDERS RESPONSIBILITY TO PROVIDE THEIR OWN QUANTITY AMOUNT.
      iv. MINOR AMOUNTS OF EXCESS MATERIALS MAY BE DISTRIBUTED ON SITE, SUBJECT TO THE CIVIL ENGINEER'S AND COUNTY'S APPROVAL AND SUBJECT TO MATERIAL QUALITY/COMPATIBILITY AND TO MAINTAINING EXISTING GRADE POINTS.
      v.
      vi. HARDSCAPE FROM THE EDGE OF THE POOL OUTWARD AND OTHER ASSOCIATED SITE HARDSCAPE. THIS INCLUDES BOTH THE POOL AND THE SPLASH PAD AREA. THE SPLASH PAD SHALL BE PROVIDED AS NOTED BELOW.
      vii. SITE UTILITIES FOR THE BUILDING
      viii. STORMWATER FACILITY/DRY POND; NOTE THAT THIS WORK ALSO APPLIES TO THE PARKING LOT ACROSS COMPETITION DRIVE, WHICH IS A SEPARATE PROJECT AND IFB.       ix. THE SITE FENCING
      x. ELECTRICAL ROUGH-INS AND PLUMBING ROUGH-INS FOR THE POOL EQUIPMENT AS NOTED ON THE MEP DRAWINGS. FINAL CONNECTIONS TO THESE ROUGH-INS SHALL BE THE RESPONSIBILITY OF THE POOL CONTRACTOR, U.O.N. ALL LINE AND HIGH VOLTAGE WIRING SHALL BE FURNISHED AND INSTALLED BY THE ELECTRICAL CONTRACTOR WITH ALL FINAL CONNECTION BY THE ELECTRICAL CONTRACTOR WITH SUPERVISION FURNISHED BY THE POOL CONTRACTOR. THE PLUMBING CONNECTION TO THE DOMESTIC WATER LINE SHALL BE BY THE POOL CONTRACTOR. THE PLUMBING SUBCONTRACTOR SHALL BRING THE DOMESTIC WATER TO THE POOL FILL MANIFOLD AND THE POOL CONTRACTOR SHALL CONNECT TO THE DOMESTIC WATER LINE AT THAT POINT.    i. IT IS THE INTENTION OF THESE IFBs TO CALL FOR TWO SEPARATE PRICES FOR THE ABOVE NOTED WORK. HOWEVER, THE POOL CONTRACTOR AND/OR THE GENERAL CONTRACTOR MAY ACT AS THE 'PRIME' CONTRACTOR BUT THE PRICES FOR THE TWO SOWs MUST BE PROVIDED SEPARATELY.
   j. THE STRUCTURAL DRAWINGS REFERENCE THE AP DRAWINGS FOR THE POOL CONSTRUCTION; THE STRUCTURAL DRAWINGS HAVE NOT BEEN UPDATED. PLEASE FOLLOW THE AP DRAWINGS FOR THE POOL SHELL CONSTRUCTION.
   k. BID SUBSTITUTIONS
      i. IT IS THE INTENTION OF THE SPECIFICATIONS TO PROVIDE A STANDARD OF QUALITY AND PERFORMANCE THAT IS SATISFACTORY FOR THE PROJECT AND FOR THE COUNTY. OCCUPANT LOAD AND CONTROL

1. THE CULPEPER COMMUNITY POOL WILL BE A SEASONAL OUTDOOR AQUATICS FACILITY OPEN TO THE PUBLIC FROM MEMORIAL DAY TO LABOR DAY AND WILL BE OCCUPIED DURING THAT TIME FRAME. IT WILL BE LOCATED WITHIN THE CULPEPER COUNTY SPORTS COMPLEX AT 16388 COMPETITION DR., CULPEPER, VA 22701. THE FACILITY WILL FEATURE SIX (6) 25-METER LAP LANES, A SPLASH PAD AND LEISURE POOL, A BATHHOUSE AND SUPPORT AREAS (CONCESSION STAND, CLASSROOM SPACE, FILTER ROOM, ETC.), AND TWO (2) 20' X 20' SHELTERS. THE FACILITY WILL BE MANAGED AND OPERATED BY THE COUNTY OF CULPEPER AND SPECIFICALLY THE PARKS & RECREATION DEPARTMENT.
2. BASED ON DISCUSSIONS, WE HAVE PROVIDED A LOWER MAXIMUM OCCUPANT LOAD (OL) THAN THAT WHICH WOULD BE CALCULATED BASED ON THE SF/OCCUPANT CODE SECTIONS. THIS NUMBER WILL ACCURATELY REFLECT THE PLANNED, ACTUAL USE OF THE BUILDING. THE PARKS AND RECREATION (DPR) DIRECTOR, ANDREW HARDY HAS INDICATED THAT AN OL OF 250, INCLUDING STAFF, IS AN APPROPRIATE NUMBER TO BASE THE DESIGN ON. THE TOTAL 250 MAXIMUM OL WILL INCLUDE THE POOL, DECK AREA AND THE BATH HOUSE FACILITIES. CLASSROOM(S) WILL NOT CONTRIBUTE TO ADDITIONAL OL AND THE FACILITIES THEMSELVES, INCLUDING THE BATHS, ETC. WILL ALSO NOT CONTRIBUTE FURTHER TO THE TOTAL 250 OL. DPR WILL MONITOR THE OCCUPANCY AS FOLLOWS:
   A. THE MAXIMUM OL WILL BE POSTED IN THE ENTRY SPACE.
   B. INGRESS AND EGRESS WILL BE FROM ONE POINT AND WILL BE MONITORED TO ENSURE THE OL IS NOT EXCEEDED.

8. PLUMBING WALL BETWEEN FAMILY ROOMS SHALL BE 2X4 @ 16" OC WOOD STUD CONSTRUCTION WITH 5/8" WR GPDW. ASSEMBLY AT EACH SIDE.

DIMENSION LAYOUT NOTE GROUND LEVEL:

LAYOUT OF WALLS SHOULD BE AS FOLLOWS: HOLD EXTERIOR WALL FACE SHEATHING TO ALIGN WITH REAR OF VENEER LEDGE HAUNCH PER DETAILS; AT VERANDA SIDE, HOLD FACE OF SHEATHING TO ALIGN WITH OUTSIDE EDGE OF CONCRETE FOUNDATION WALL PER THE DETAILS. NOTE THAT THIS MAY RESULT IN A GAIN OF APPROX. 3/4" ON INTERIOR SIDE-TO-SIDE DIMENSIONS SINCE A 3/4" AIR SPACE WAS ORIGINALLY ALLOWED FOR BEHIND CLADDING BUT IS NO LONGER BEING USED. ALL DIMENSIONS SHALL BE VIF BEFORE FRAMING AND ARCHITECT NOTIFIED OF ANY DISCREPANCIES/ISSUES. IN PARTICULAR, ENSURE THAT INTERIOR ACCESSIBILITY DIMENSIONS ARE MET OR EXCEEDED.

PLAN NOTE:

EQUIVALENT DRYER EXHAUST DUCT LENGTH FOR STAFF DRYER CANNOT BE GREATER THAN 35'. LONGER DUCT LENGTHS CAN BE USED IF PERMITTED IN THE DRYER INSTALLATION OPERATION MANUAL. MAXIMUM ALLOWED EQUIVALENT DRYER EXHAUST DUCT LENGTH FOR THIS PROJECT IS 50'. A SIGN NOTING THIS REQUIREMENT, AS NOTED IN THE MECHANICAL DRAWINGS, SHALL BE POSTED WITHIN THE SPACE.

   B. AIR BARRIER JOINTS AND SEAMS SHALL BE SEALED, INCLUDING SEALING TRANSITIONS IN PLACES AND CHANGES IN MATERIALS. JOINTS AND SEALS SHALL BE SECURELY INSTALLED IN OR ON THE JOINT FOR ITS ENTIRE LENGTH SO AS NOT TO DISLODGE, LOOSEN OR OTHERWISE IMPAIR ITS ABILITY TO RESIST POSITIVE AND NEGATIVE PRESSURE FROM WIND, STACK EFFECT AND MECHANICAL VENTILATION.
   C. PENETRATIONS OF THE AIR BARRIER SHALL BE CAULKED, GASKETED OR OTHERWISE SEALED IN A MANNER COMPATIBLE WITH THE CONSTRUCTION MATERIALS AND LOCATION. JOINTS AND SEALS ASSOCIATED WITH PENETRATIONS SHALL BE SEALED IN THE SAME MANNER OR TAPED OR COVERED WITH MOISTURE VAPOR-PERMEABLE WRAPPING MATERIAL. SEALING MATERIALS SHALL BE APPROPRIATE TO THE CONSTRUCTION MATERIALS BEING SEALED AND SHALL BE SECURELY INSTALLED AROUND THE PENETRATION SO AS NOT TO DISLODGE, LOOSEN OR OTHERWISE IMPAIR THE PENETRATIONS' ABILITY TO RESIST POSITIVE AND NEGATIVE PRESSURE FROM WIND, STACK EFFECT AND MECHANICAL VENTILATION. SEALING OF CONCEALED FIRE SPRINKLERS, WHERE REQUIRED, SHALL BE IN A MANNER THAT IS RECOMMENDED BY THE MANUFACTURER. CAULKING OR OTHER ADHESIVE SEALANTS SHALL NOT BE USED TO FILL VOIDS BETWEEN FIRE SPRINKLER COVER PLATES AND WALLS OR CEILINGS.
   D. RECESSED LIGHTING FIXTURES SHALL COMPLY WITH APPLICABLE SECTIONS OF THE VEC, OR EQUIVOLENT. WHERE SIMILAR OBJECTS ARE INSTALLED THAT PENETRATE THE AIR BARRIER, PROVISIONS SHALL BE MADE TO MAINTAIN THE INTEGRITY OF THE AIR BARRIER.

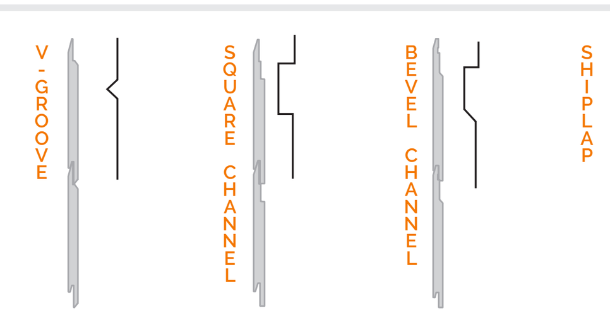
Artisan® Siding with Lock Joint System

MULTIFAMILY / COMMERCIAL INSTALLATION REQUIREMENTS

EFFECTIVE JULY 2020

IMPORTANT: FAILURE TO FOLLOW JAMES HARDIE WRITTEN INSTALLATION INSTRUCTIONS AND COMPLY WITH APPLICABLE BUILDING CODES MAY VIOLATE LOCAL LAWS, AFFECT BUILDING ENVELOPE PERFORMANCE AND MAY AFFECT WARRANTY COVERAGE. FAILURE TO COMPLY WITH ALL HEALTH AND SAFETY REGULATIONS WHEN CUTTING AND INSTALLING THIS PRODUCT MAY RESULT IN PERSONAL INJURY. BEFORE INSTALLATION, CONFIRM YOU ARE USING THE CORRECT HARDIEZONE® PRODUCT INSTRUCTIONS BY VISITING HARDIEZONE.COM OR CALL 1-866-942-7343 (866-9-HARDIE).

All profiles can be installed horizontally, vertically, and as soffit.



STORAGE

Store flat and keep dry and covered prior to installation. Installing siding wet or saturated may result in shrinkage at joints. Protect edges and corners from breakage. James Hardie is not responsible for damage caused by improper storage and handling of the product

HANDLING

To prevent damage to edges, extra care should be taken when removing planks from the pallet, while handling, and when installing. Planks are interlocked together on the pallet, therefore they should be removed from the pallet horizontally (side to side) to allow planks to unlock themselves from one another.

CUTTING INSTRUCTIONS

1. Position cutting station so that wind will blow dust away from user and others in working area.
2. Use one of the following methods:
   a. **Best**: Circular saw equipped with a HardieBlade® saw blade and attached vacuum dust collection system
   b. **Better**: Circular saw equipped with a HardieBlade saw blade and a dust collection feature (e.g. Roan® Saw)
   C. **Good**: Circular saw equipped with a HardieBlade saw blade

For maximum dust reduction, James Hardie recommends using the "Best" cutting practices.
For best performance when cutting with a circular saw, James Hardie recommends using HardieBlade saw blades.

– **NEVER** grind or cut with a power saw indoors.
– **NEVER** dry sweep dust; use wet dust suppression or vacuum to collect dust.

NOTE: James Hardie makes no representation or warranty that use of a particular cutting option will assure your compliance with applicable laws and safety requirements. If you are unsure which cutting option is best for your jobsite, consult a qualified industrial hygienist or safety professional, or contact your James Hardie representative for assistance.

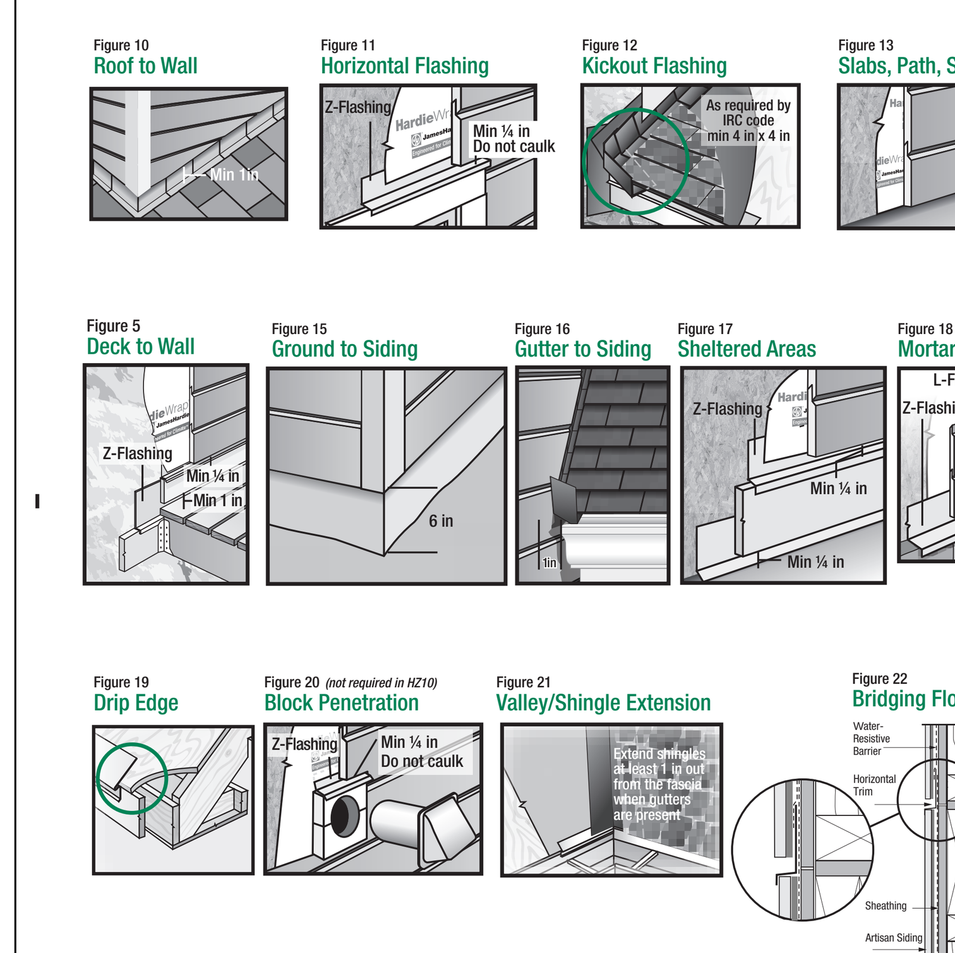
CLEARANCE AND FLASHING REQUIREMENTS

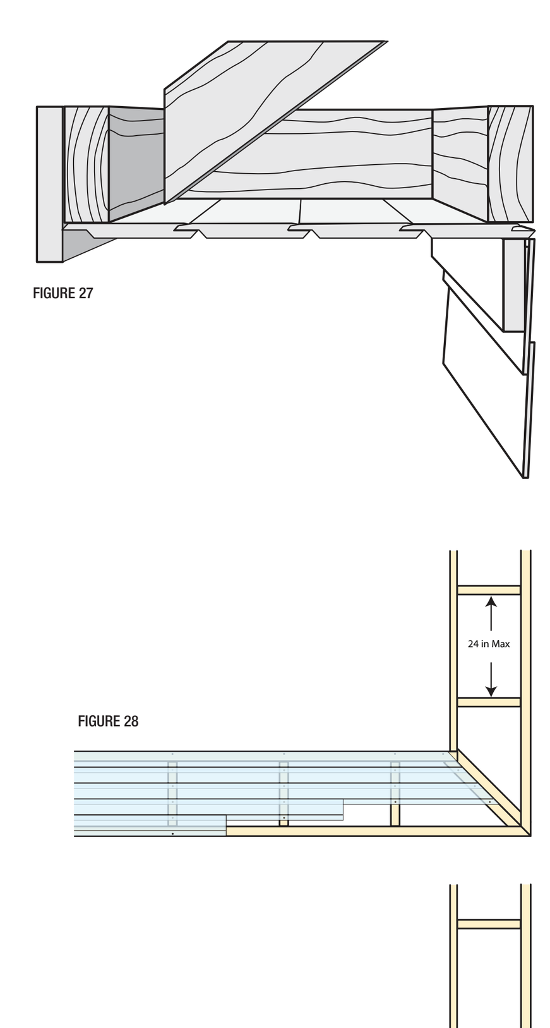


ARTISAN SIDING PRODUCTS AS SOFFIT

- Artisan siding with Lock Joint System may be installed in soffit applications over wood or steel framing spaced a maximum of 24 inches on center.
- Refer to product Technical Data Sheet for wind load and fastening information.
- Additional framing may be needed to ensure proper fastening.
- Artisan siding can be installed in the long direction (fig. 28) or the short direction (fig. 29)
- Plan and cut out for any venting requirements prior to installation of Artisan siding.
- Artisan siding butt joints are to land off stud (fig. 29). Install butt joints in moderate contact in soffit applications (caulking, H covers, and battens are also acceptable)

Fastening

- BLIND NAILING: Place fastener no closer than 1 in from Artisan siding ends and 1 in. down from top of Artisan siding.
- FACE NAILING: Place fastener no closer than 1 in from Artisan siding ends and 2 in from bottom of Artisan siding.



TECHNICAL DATA SHEET

Effective April 2018

Artisan® Siding with Lock Joint System

All national, state, and local building code requirements must be followed and where they are more stringent than the Artisan® Lap Siding installation requirements, state and local requirements will take precedence.

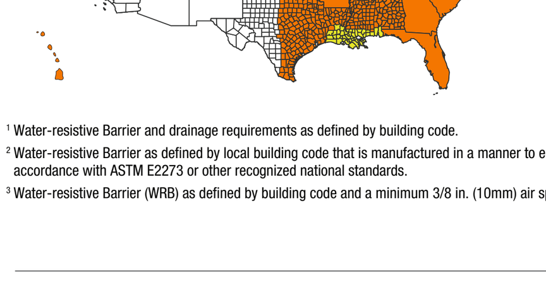
GENERAL REQUIREMENTS

- Refer to table 1 for multifamily/commercial drainage requirements for Artisan with Lock Joint System siding.
- Artisan® siding can be installed over braced wood or steel studs, 20 gauge (33 mils) minimum to 16 gauge (54 mils) maximum, spaced a maximum of 24 in o.c. or directly to minimum 7/16 in thick OSB sheathing. See General Fastening Requirements. Irregularities in framing and sheathing can mirror through the finished application. Correct irregularities before installing siding.
- Information on installing James Hardie products over non-nailable substrates (ex: gypsum, foam,etc.) can be located in JH Tech Bulletin 19 at www.jameshardiepros.com
- A water-resistive barrier is required in accordance with local building code requirements. The water-resistive barrier must be appropriately installed with penetration and junction flashing in accordance with local building code requirements. James Hardie will assume no responsibility for water infiltration. James Hardie does manufacture HardieWrap® Weather Barrier, a non-woven non-perforated housewrap, which complies with building code requirements.
- Adjacent finished grade must slope away from the building in accordance with local building codes - typically a minimum of 6 in in the first 10 ft
- Do not use Artisan® siding in Fascia or Trim applications.
- Artisan siding may be installed on vertical wall applications only.
- Do not install James Hardie® products such that they may remain in contact with standing water.
- The designer and/or architect should take into consideration the coefficient of thermal expansion and moisture movement of the product in their design. This information can be found in the Technical Bulletin #8 "Expansion Characteristics of James Hardie Siding Products at www.aspyredesign.com.
- Consult Artisan Siding with Lock Joint System Technical Data Sheet at www.jameshardiepros.com.
- James Hardie Building Products provides installation /wind load information for buildings with a maximum mean roof height of 85 feet. For information on installations above 60 feet, please contact JH technical support.

TABLE 1: ARTISAN® WITH LOCK JOINT SYSTEM SIDING WALL DRAINAGE REQUIREMENTS

(see page 5 for additional vertical installation requirements)

All national, state, and local building codes must be followed, and where they are more stringent than James Hardie Installation requirements, state and local requirements will take precedence. Consult the "Exterior Wall Drainage Requirements" bulletin at www.jameshardiecommercial.com for additional guidance and a more detailed list of drainage required areas.



MINIMUM REQUIREMENTS BY STATE/COUNTY

- (A) WRB[1] *Dry Climates*
- (B) DRAINAGE PLANE (E.G. DRAINABLE WRB) WITH 90% DRAINAGE EFFICIENCY[2] *Moist and Marine Climates*
- (C) RAINSCREEN (MIN. 3/8 IN. AIR GAP)[3] *Severe Wind Driven Rain Climate*

[1] Water-resistive Barrier and drainage requirements as defined by building code.
[2] Water-resistive Barrier as defined by local building code that is manufactured in a manner to enhance drainage; must meet minimum 90% drainage efficiency when tested in accordance with ASTM E2273 or other recognized national standards.
[3] Water-resistive Barrier (WRB) as defined by building code and a minimum 3/8 in. (10mm) air space between the WRB and the panel siding (formed by minimum 3/8 in. furring).

INSTALLATION

A. Follow all clearance requirements.
B. A starter strip is not needed.
C. Level and install starter course.
Tip: Use a small scrap piece of siding to use as a block to seat the siding into the course below.
D. Artisan® siding butt joints shall land a minimum 2 in off stud (fig. 1, 4, or 7).
E. Artisan siding can now be installed by stacking the siding onto the course below. This can be completed by one person without the need of a lap gauge.
F. Measure occasionally to ensure siding is level and has proper reveal.
G. In areas such as gables, under windows, or other areas where stacking may be difficult use one of the following methods
1. Cut the material in sections, install first section into place. Take remaining section and slide into place, then fasten both sections.
2. Using a utility knife, cut the bottom lip from the siding and install in the traditional method.

JOINT TREATMENT

- Vertical Joints - Artisan with Lock Joint System siding butt joints can be treated with either caulk figures 2, 5, 8) or by removing minimum 3 in of locking lip from both ends of siding then place a joint flashing.
- Horizontal Joints - Provide positive slope Z-flashing at all required horizontal joints: between floors; window heads; door heads; belly bands; etc. (figures 3, 6, 9).

ARTISAN SIDING INSTALLED VERTICALLY

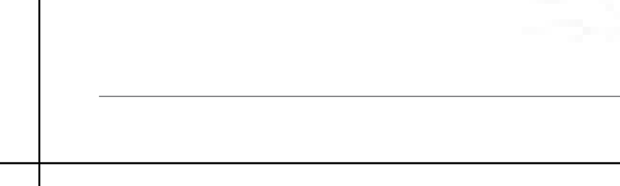
The vertically installed Artisan siding with Lock Joint System shall not bridge floors. A horizontal joint shall be created between floors, and z-flashing shall be provided at each horizontal joint.

- A thru-wall flashing tying the z-flashing back to the drainage plane should be provided every other floor.

Only full length pieces shall be used per each floor section, except where abutting wall openings and penetrations. Do not create horizontal butt joints between planks.

A bead of sealant must be placed along the entire length inside each groove of the lock joint about to be installed on the wall. (see Fig. 23).

FIGURE 23



GENERAL FASTENING REQUIREMENTS

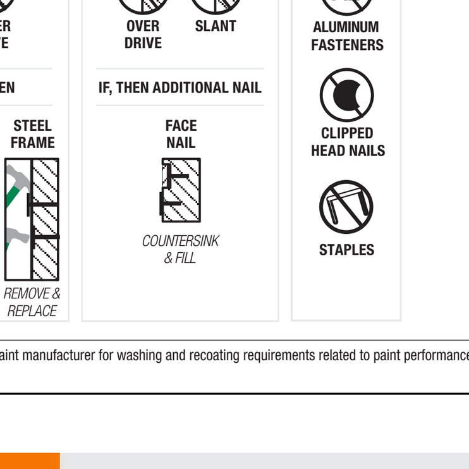
Fasteners must be corrosion resistant, galvanized, or stainless steel. Electro-galvanized are acceptable but may exhibit premature corrosion. James Hardie recommends the use of quality, hot-dipped galvanized nails. James Hardie is not responsible for the corrosion resistance of fasteners. Stainless steel fasteners are recommended when installing James Hardie products near the ocean, large bodies of water, or in very humid climates.

Manufacturers of ACQ and CA preservative-treated wood recommend spacer materials or other physical barriers to prevent direct contact of ACQ or CA preservative-treated wood and aluminum products. Fasteners used to attach HardieTrim Tabs to preservative-treated wood shall be of hot dipped zinc-coated galvanized steel or stainless steel.

- Consult applicable product evaluation or listing for correct fasteners type and placement to achieve specified design wind loads.
- NOTE: Published wind loads may not be applicable to all areas where Local Building Codes have specific jurisdiction. Consult James Hardie Technical Services if you are unsure of applicable compliance documentation.
- Drive fasteners perpendicular to siding and framing.
- Fastener heads should fit snug against siding (no air space).
- Do not over-drive nail heads or drive nails at an angle.
- If nail is countersunk, fill nail hole and add a nail.
- For wood framing, under driven nails should be hit flush to the plank with a hammer (For steel framing, remove and replace nail).
- Do not use aluminum fasteners, staples, or clipped head nails.

PNEUMATIC FASTENING

James Hardie products can be hand nailed or fastened with a pneumatic tool. Pneumatic fastening is highly recommended. Set air pressure so that the fastener is driven snug with the surface of the siding. A flush mount attachment on the pneumatic tool is recommended. This will help control the depth the nail is driven. If setting the nail depth proves difficult, choose a setting that under drives the nail. (Drive under driven nails snug with a smooth faced hammer - Does not apply for installation to steel framing).



CAULKING & PAINTING

Elastomeric Joint Sealant complying with ASTM C920 Grade NS, Class 25 or higher or a Latex Joint Sealant complying with ASTM C834. Caulking/Sealant must be applied in accordance with the caulking/sealant manufacturer's written instructions. **Note: Some caulking manufacturers do not allow tooling.**

DO NOT use stain, oil/alkyd base paint, or powder coating on James Hardie® Products. Factory primed James Hardie products must be painted within 180 days. 100% acrylic topcoats are recommended. Do not paint when wet. For application rates refer to paint manufacturers specifications. Back-rolling is recommended if the siding is sprayed.

CUT EDGE TREATMENT

Caulk, paint or prime all field cut edges.

CARE & MAINTENANCE

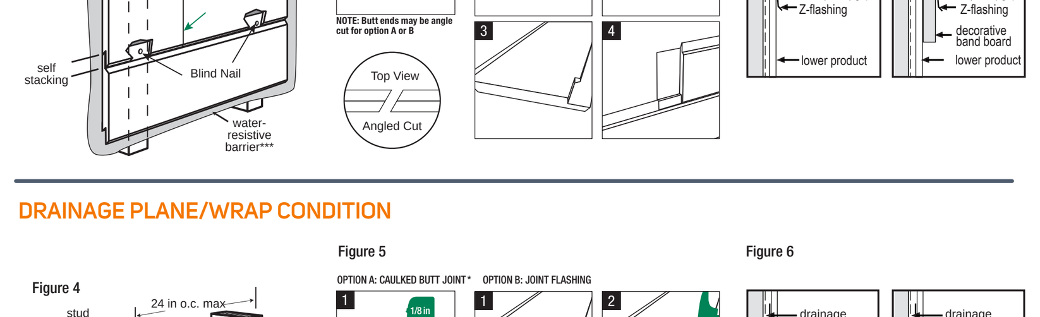
As a guide, it is recommended that normal maintenance tasks shall include but not be limited to:

- Washing down the exterior surfaces every 6 to 12 months with a garden hose or low pressure water spray to remove dirt and debris.*
- Re-applying of exterior finishes.*
- Maintaining the exterior envelope and connections including joints, penetrations, flashings, and sealants (caulking) that may provide a means of moisture entry beyond the exterior cladding.
- Cleaning out gutters, blocked pipes, and overflows as required.
- Pruning back vegetation that is touching the building. Clearance between the siding and shrubs is recommended.
- Ensuring required external ground clearances and drainage slopes are maintained.

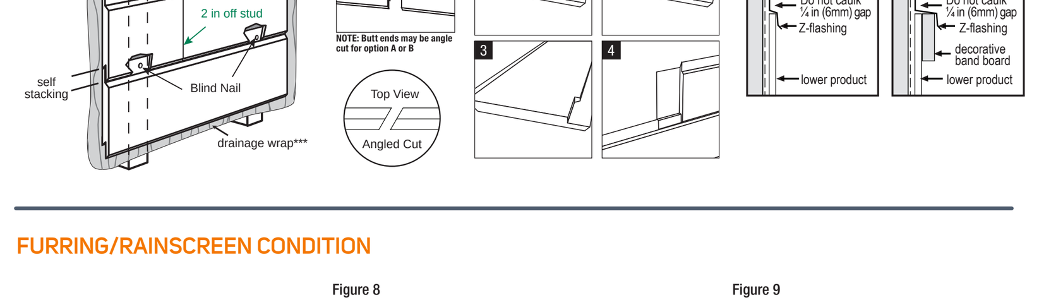
*Refer to your paint manufacturer for washing and recoating requirements related to paint performance.

Table 1 (cont.)

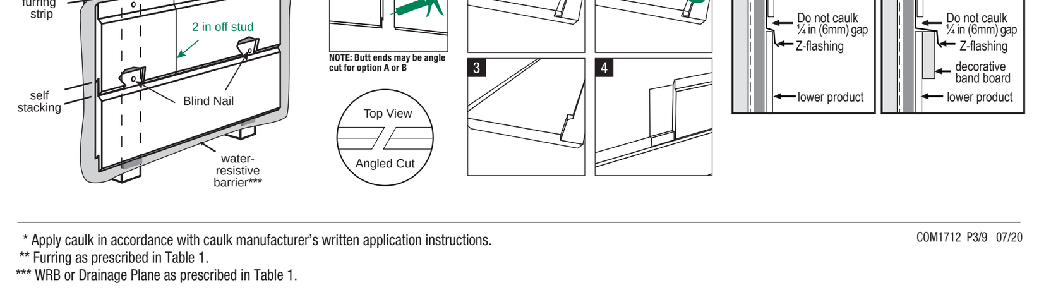
WATER RESISTIVE BARRIER CONDITION



DRAINAGE PLANE/WRAP CONDITION



FURRING/RAINSCREEN CONDITION



* Apply caulk in accordance with caulk manufacturer's written application instructions.
** Furring as prescribed in Table 1.
*** WRB or Drainage Plane as prescribed in Table 1.

Fastening to Furring

Where James Hardie wall drainage guidelines require installation over furring, only a steel hat channel furring may be used. The steel furring must be 20 gauge (33 mil) minimum to 16 gauge (54 mil) maximum.

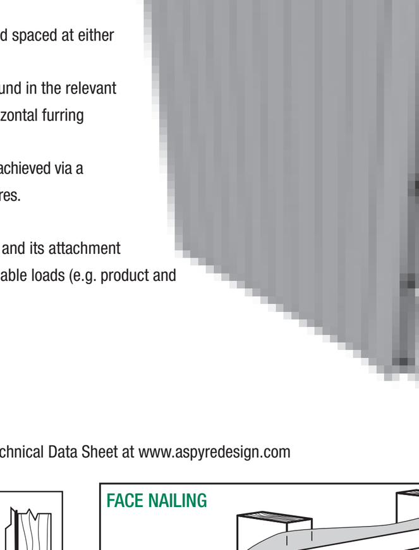
The furring directly behind the Artisan siding shall be oriented horizontally and spaced at either 16 in or 24 in on center.

- The wind resistance values for 16 in and 24 in o.c steel framing can be found in the relevant technical data sheet or product evaluation report are applicable to the horizontal furring

Sealant is not required if ventilation is created behind the cladding. This can be achieved via a double-layer furring system (fig. 24) or single-layer furring with ventilation features.

It is the responsibility of the design professional to design the furring system and its attachment to structural members such that the entire assembly can withstand all applicable loads (e.g. product and furring weight, wind loads, deflection limitations, thermal, etc.).

FIGURE 24



FASTENER REQUIREMENTS

- Do not nail within 2 in of the end of planks.
- For proper fastener selection and wind load table, refer to the product Technical Data Sheet at www.aspyredesign.com

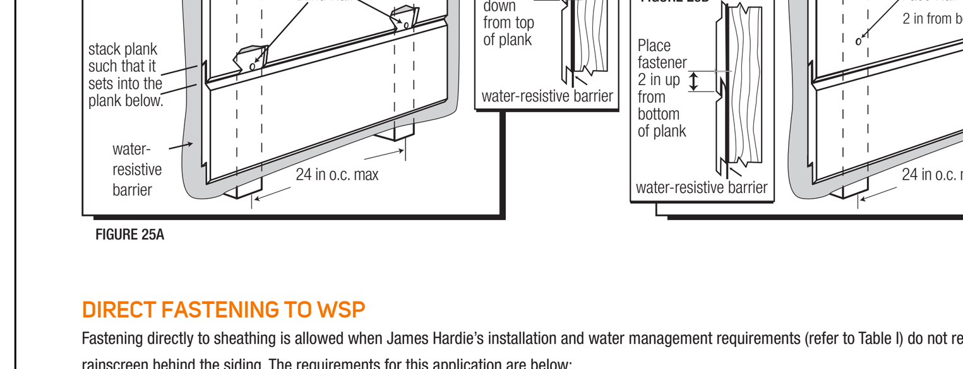


FIGURE 25A FIGURE 26A

DIRECT FASTENING TO WSP

Fastening directly to sheathing is allowed when James Hardie's installation and water management requirements (refer to Table I) do not require the use of a rainscreen behind the siding. The requirements for this application are below:

- A minimum 7/16 in Wood Structural Panel (WSP), attached per code, is available as the outer most layer directly behind the siding.
- Siding is fastened directly to the minimum 7/16 in WSP over a standard Water Resistive Barrier (WRB) or drainable housewrap.

WARNING

High pressure water blast and sand blasting may damage the surface of the fiber cement product. Low pressure water spray, a soft medium bristle (nonmetal) brush is most suitable for cleaning fiber cement products. Acid washing can damage the fiber cement surface and is not recommended.
Note: If using a pressure washer, care must be taken to ensure that the water stream does not damage the surface of the siding. Damage to siding arising from improper cleaning or maintenance may not be covered by the James Hardie warranty. Using wide fan tips that are kept a minimum of 6 feet from the wall and at pressures under 1500 psi will minimize the chance of damaging the siding.

SILICA WARNING

DANGER: May cause cancer if dust from product is inhaled. Causes damage to lungs and respiratory system through prolonged or repeated inhalation of dust from product. Refer to the current product Safety Data Sheet before use. The hazard associated with fiber cement arises from crystalline silica present in the dust generated by activities such as cutting, machining, drilling, routing, sawing, crushing, or otherwise abrading fiber cement, and when cleaning up, disposing of or moving the dust. When doing any of these activities in a manner that generates dust you must (1) comply with the OSHA standard for silica dust and/or other applicable law, (2) follow James Hardie cutting instructions to reduce or limit the release of dust; (3) warn others in the area to avoid breathing the dust; (4) when using mechanical saw or high speed cutting tools, work outdoors and use dust collection equipment; and (5) if no other dust controls are available, wear a dust mask or respirator that meets NIOSH requirements (e.g. N-95 dust mask). During clean-up, use a well maintained vacuum and filter appropriate for capturing fine (respirable) dust or use wet clean-up methods - never dry sweep.

⚠ **WARNING: This product can expose you to chemicals including respirable crystalline silica, which is known to the State of California to cause cancer. For more information go to P65Warnings.ca.gov.**

HARDWARE SCHEDULE NOTES:

1. DOOR HARDWARE NOTED HEREIN OR ON A SEPARATE HARDWARE SCHEDULE IS A SUBMITTAL ITEM. HARDWARE NOTATIONS ESTABLISH THE GENERAL LEVEL OF QUALITY AND FUNCTION THAT THE COIUNTY REQUIRES BUT MAY NOT INCLUDE ALL ITEMS NECESSARY TO INSTALL THE LOCK OR PREP THE DOOR FOR THE HARDWARE. GC AND HARDWARE SUPPLIER SHALL REVIEW THE SPEC/SCHEDULE AND ASSIST THE ARCHITECT AND COUNTY IN PREPARING A COMPLETE AND THOROUGH HARDWARE SCHEDULE THAT CLEARLY AND COMPLETELY LISTS ALL LOCKSETS, DOOR PREP REQUIREMENTS, CYLINDER TYPES AND REQUIREMENTS, FUNCTIONS AND OTHER, ASSOCIATED HARDWARE. WHERE POSSIBLE, DOOR PREP REQUIREMENTS HAVE BEEN NOTED BUT IT IS THE RESPONSIBILITY OF THE GC/VENDOR TO CONFIRM ALL REQUIREMENTS PRIOR TO ORDERING.
2. ALL FUNCTIONS OF LOCKS SHALL BE CLEARLY NOTED AND SHALL BE CONFIRMED WITH THE COUNTY DURING THE SUBMITTAL PROCESS. NOTE ALSO, THAT THE COUNTY USES A GRAND MASTER KEYING SYSTEM, SO ALL LOCKSET CORES/CYLINDERS SHALL BE COMPATIBLE WITH THAT SYSTEM.
3. CULPEPER COUNTY HAS REQUESTED THAT SARGENT LOCKSETS BE SPECIFIED FOR THIS PROJECT TO MAINTAIN CONTINUITY ACROSS COUNTY FACILITIES. SUBSTITIONS FOR THESE LOCKSETS WILL NOT BE CONSIDERED UNLESS SPECIFIED ITEMS ARE UNAVAILABLE AT TIME OF CONSTRUCTION OR ARE OTHERWISE UNSUITABLE FOR THE APPLICATION.
4. CORES CYLINDERS SHALL ALSO BE COORDINATED WITH THE KEYS/CORES/CYLINDERS OF THE CULPEPER FIELD HOUSE KEYING SYSTEM.
5. OTHER ITEMS ARE AN ‘OR APPROVED EQUAL’, SUBJECT TO SUBMITTAL REQUIRMENTS.

Q. WEATHER STRIPPING: PEMKO OR APPROVED EQUAL; PEMKO 29310CV, GREY OR BLACK.

R. INDIVIDUAL DOOR THRESHOLD SILL IF NOT OTHERWISE PROVIDED AS PART OF FRAME PACKAGE; B.O.D. IS PEMKO. **PLEASE NOTE THE FOLLOWING REGARDING DESIGN INTENT AND SILL SPEC:** THE INTENTION IS TO USE A HALF-SADDLE PROFILE WHERE THE FINISH EPOXY FLOORING IS NOT CONTINUOUS ON BOTH SIDES OF THE DOOR, SO THAT THE SQUARE EDGE OF THE SILL ACTS AS A STOP FOR THE FLOORING MATERIAL. HOWEVER, ON DOORS WHERE THE EPOXY FLOORING IS CONTINUOUS ON BOTH SIDES, SILL PROFILE IS DEPENDENT ON CONSTRUCTION SEQUENCE AND WHEN THE FLOOR IS INSTALLED IN RELATION TO THE DOOR SILLS. IF THE DOOR SILLS ARE FIT AFTER THE FRAMES ARE SET AND DOORS INSTALLED, A STANDARD SADDLE PROFILE CAN BE USED SINCE IT WILL BRIDGE OVER THE FINISH FLOORING. HOWEVER, IF THE SILLS ARE SET BEFORE FLOORING INSTALLATION, A DIFFERENT SILL PROFILE WILL BE NEEDED WHERE THE EPOXY FLOOR OCCURS ON BOTH SIDES OF THE SILL, IN ORDER TO PROVIDE A STOP FOR THE EPOXY MATERIAL ON BOTH SIDES AND SO THAT THE EPOXY COATING DOES NOT BURY/LAP UNTO THE SILL. THIS SILL PROFILE WOULD BE SIMILAR TO PEMKO #2755 HALF-SADDLE JOINER. THIS SITUATION MUST BE REVIEWED AND DECIDED PRIOR TO FLOORING INSTALLATION AND SILL/HARDWARE SUBMITTAL AND ORDERING TO ENSURE THAT THE CORRECT SILL IS USED. THEREFORE, THE SPECS BELOW ARE GUIIDELINES AND ARE NOT FINAL AND MUST BE CONFIRMED BY THE GC.
   a. DOOR SILLS WHERE THERE IS NO CHANGE IN SLAB HEIGHT AND FLOOR FINISH IS CONSISTENT: PEMKO ½” MAX HEIGHT SADDLE THRESHOLD, SIMILAR TO #171/172, OF APPROPRIATE LENGTH TO MATE WITH JAMB; MILL FINISH ALUMINUM; BHMA CERTIFIED.
   b. DOOR SILLS WHERE THERE IS CHANGE IN SLAB HEIGHT AND FLOOR FINISH IS NOT CONSISTENT THROUGH OR WHERE FLOOR FINISH STOPS AT AN EXTERIOR/INTERIOR DOOR: PEMKO 1/4” MAX HEIGHT HALF-SADDLE THRESHOLD, SIMILAR TO #275/2746 OF APPROPRIATE LENGTH TO MATE WITH JAMB; MILL FINISH ALUMINUM; BHMA CERTIFIED. NOTE THAT HALF SADDLE IS INTENDED TO ACT AS A STOP TO THE INTERIOR 1/8-3/16” THICK EPOXY FLOORING SPECIFIED; THE SILL MIUST BE A MAXIMUM ¼” HIGH TO MEET

GENERAL SIGNAGE NOTES

1. All signage to comply with ADA, ICC A117.1-2009 and Virginia Dept. of Health swimming pool code standards.
2. Sign material to be .25" thick Thermoplastic, matte finish, choice of standard colors by Architect.
3. Match color and style of existing signage. Re-use existing signage where appropriate.
4. All graphics to be raised 1/32" minimum, color to contrast with background.
5. Braille to be Grade II, domed.
6. Attach signage with Vinyl Foam Tape.

GENERAL NOTES - POOL CONSTRUCTION

1. Verify exact conditions and dimensions at the project site prior to initiating actual work. Immediately notify architect if any significant variations exist.
2. Architect shall be notified upon completion of the excavation for the new pool area. Architect to examine the soil conditions present at the site. The contractor shall provide testing of the soil conditions to verify bearing capacity of site material at the required depth of excavation. If in the opinion of the architect soil conditions appear unsatisfactory for the installation of the new work, additional excavation will be performed to reach suitable bearing material. Backfilling with controlled-engineered-fill will be required to reach appropriate sub-base elevation.
3. Contractor shall verify rough dimensions to allow for pool finish to produce intended finished dimensions shown on the drawings. Pool depth and width shall be within tolerances established in the technical specifications.
4. Pool shell structure to conform to profiles indicated on the pool sections and details.
5. Pool contractor shall form rear of pool wall structure to conform to profiles indicated on the pool sections and details. In the event soil conditions permit excavation to required profiles, forming can be omitted or minimized. Under no circumstances will a change order be issued for form work for the pool shell construction. In the event form work can be omitted or minimized a credit shall be offered to the owner for any reasonable savings this deviation from the cost process generates.
6. All new concrete work shall be properly cured. In the event the pool is placed prior to the onset of winter, proper protection is required.
7. Install all assemblies, equipment, valves, piping, power wiring, and related devices in strict accordance with respective manufacturer's written installation instructions and all applicable local codes and regulations.
8. All new pool construction shall be "dry-gun" gunite method. "Shot crete" shall be acceptable under strict conditions. See specifications for installation and curing procedures. Consult with architect if cast-in-place concrete is to be considered. All redesign shall be the responsibility of the pool contractor.
9. Coordinate installation of all pool deck equipment. Provide all required templates, mounting instructions, and specific anchors to install pool deck equipment. No patched concrete deck work will be accepted in the event anchors are not installed in the proper sequence or location. Provide supervision for the installation of all anchors installed by the general contractor.
10. All ceramic tile features shall be installed over a cement mortar float bed to produce a smooth and level ceramic tile installation. The contractor shall verify placement of the depth markers based upon field measurements of finish depths and locate all markers within 1" of the indicated depth. Install depth markers flush with deck. Final appearance shall be uniform with deck and present no rough edges. Depth markers bridging control or expansion joints are unacceptable. Spacing of depth markers shall be no more than 25'-0".
11. Coordinate mechanical work with the work of other trades to avoid the potential of excessive cutting and patching after finished surfaces have been installed. The pool contractor shall bear the cost of all repair work if work is performed out of sequence with the general trades.
12. The drawings are schematic in nature and are developed to include sufficient information required to construct the new pool. The design is intended to meet current requirements of the state and national building codes for swimming pool construction.
13. As built drawings: pool contractor shall maintain accurate records of all deviations in work as actually installed from work indicated on the drawings.

POOL BUILDER SCOPE OF WORK

The Pool Builder is responsible for all pool construction in accordance with the Project Manual, Section 13 11 00 - Summary Of The Swimming Pool Work, and as shown on plans.

Electrical: The Pool Builder is only resposnible for low voltage wiring. All wiring with line voltage will be by Electrical Contractor.

Bonding: The Electrical Contractor is responsible for bonding of all pool components, and building components within (5) feet of the pool.

Plumbing: The Pool Builder is responsible for all piping, valves and controls for the pool filtration system and automatic pool fill. The Contractor shall provide a capped water supply pipe to the pool fill location shown on plans.

2. All pool piping is to be schedule 80 PVC unless otherwise noted. All piping to and on the return side of the pool heater shall be CPVC if alternate is selected.
3. Slope all suction water drain lines, where possible, at max 1/8" per foot unless otherwise noted.
4. Dye testing (crystal violet or equivalent) should be performed to determine and adjust the recirculation pattern.
5. All equipment and piping shall be installed to drain completely by use of drain plugs, drain valves, or other means. All piping shall be supported continuously or at sufficiently close intervals to prevent sagging with lateral bracing. All suction piping shall be sloped in one direction, towards the filter room. All supply and return lines to the pool shall be provided with valves or other means to allow the piping to be drained.
6. Main drains shall be protected by gratings or other approved covers having an opening sufficient to restrict water velocity to less than 1.5 feet per second through the grating. Gratings shall not be removable without the use of tools and shall conform to the VGBA.
7. All penetrations through walls and floors are to have firestopping as per code.
8. All piping beyond the mechanical room to be concealed underslab or in walls.

CONSTRUCTION NOTES

1. All construction shall conform to existing Town, State and County building codes. It is the contractor's responsibility to be aware of all applicable standards and specifications as well as required methods of construction. The contractor shall furnish all materials, labor, and equipment to perform all work, including restoration, for the completed installation of all improvements shown hereon or implied as necessary to complete the proposed improvements.

2. The contractor or his agent shall be responsible for digging test pits to determine the exact location of any existing underground utilities prior to the beginning of construction. In particular, test pits adjacent to existing high pressure gas mains shall be performed in the presence of a gas company representative and shall be hand dug according to their instruction. Utilities shown hereon are based on available information.

3. No title report was furnished. However, this property is subject to any existing easements, covenants and servitudes of record.

4. All erosion and sediment control practices shall be constructed and maintained in accordance with the minimum standards and specifications of the 1992 Virginia Erosion and Sediment Control Handbook and County ordinances. Removal of said controls shall be authorized by the County inspector but, at least, shall not be removed until permanent vegetative cover is established on all denuded areas.

5. Construction should be sequenced so that grading operations can begin and end as quickly as possible. Sediment trapping measures, such as silt fences, shall be installed and made functional before any land disturbing activity begins.

6. Engineered fill and backfill shall be approved select materials and shall be placed in six to eight inch layers and compacted at optimum moisture, plus or minus two percent, to a density of not less than 95 percent in accordance with A.A.S.H.T.O. T-99 or A.S.T.M. D-698.

7. No subsurface investigation has been performed by Hinchey and Baines, plc. to attest to the soil conditions or the presence of toxic or contaminated waste.

8. It shall be the responsibility of the contractor or developer to have sufficient soils and foundation testing performed to determine that the support values and C.B.R.'s are adequate for the standards shown on this plan.

9. All construction involving problem soils must be performed under the full-time inspection of a professional geotechnical engineer.

10. The contractor shall perform necessary grading to preclude the ponding of water on roadways and buildable areas.

11. There are no known gravesites on this site. In the event gravesites are discovered during construction, the County Zoning Office should be notified immediately. All activities must cease and shall not resume until authorization to proceed is granted by the County Zoning Office. Gravesites shall be protected in accordance with state law.

12. All fill materials and their subgrade will be approved by the soils engineer for this site.

13. A portion of the land hereon is located in the F.I.R.M. 100-year special floodplain area zone "A", as indicated on Flood Insurance Rate Map (FIRM) number 51047C0230D, effective date February 26, 2021. This remainder of the property is located in zone "X".

14. All wetland permits required by federal, state, and local laws and regulations shall have been obtained prior to initiating grading or any other on-site land disturbing activity.

15. The developer shall be responsible for the relocation of any utilities which may be required as a result of this project. The relocation should be done prior to construction.

16. The developer shall be responsible for any damage to the existing streets and utilities which occurs as a result of this project within or contiguous to the existing right-of-way.

17. All construction in street right-of-way shall be in conformance with standards and specifications of the Virginia Department of Transportation and the County of Culpeper.

18. There are no known historic buildings or features on site.

- * The percentage of recycled content may vary depending on availability of recycled materials.
- Dimensions and weight are subject to manufacturing tolerances and are influenced by recycled components.
- End-to-end or side-to-side warp of the GEOBLOCK5150 unit shall not be greater than 0.5 in (6 mm).
- Avoid specifications that state material compressive strength only. Material compressive strength, with applied factors of safety must be sufficient to resist compressive and lateral loads. In addition, ultra-high compressive strength adds little value to a porous pavement system.

Trail Use. Loading for pedestrian, wheelchair, equestrian, bicycle, motorcycle and ATV traffic	None	None

[1] The GEOBLOCK5150 system can be applied in areas where loading is greater than those listed above. In these situations, call Presto Geosystems or an authorized Presto Geosystems' representative for specific recommendations.

[2] CBR is the abbreviation for California Bearing Ratio. Methods for determining CBR vary from more sophisticated laboratory methods to simple field identification methods that use hand manipulation of the soil. Presto does not recommend one method over the other; however, the user must have a high degree of confidence in the results produced by the chosen method.

[3] If other-than-CBR soil strength values exist, use available correlation charts to relate the value to CBR.

[4] Infrequent passes is defined as the number of passes over any period of time that causes no lasting damage to the vegetation. This number will be a function of vegetation type and age, climatic conditions, and maintenance practices. This number is not a function of the GEOBLOCK5150 material.

BEDS FOR MASS PLANTING SHALL BE ENTIRELY ROTOTILLED TO A DEPTH OF 8 INCHES AND SHALL BE 18 INCHES BEYOND THE AVERAGE OUTSIDE EDGE OF PLANT BALLS. ORGANIC MATERIAL (I.E., LEAF MOLD) WILL BE INCORPORATED INTO PLANT BED BY TILLING AGAIN. PROPORTIONS OF SOIL TO ORGANIC MATERIAL WILL BE 2 PARTS TO 1 PART.

PLANTING: BACKFILLING SHALL BE DONE WITH SOIL MIX, REASONABLY FREE OF STONES, SUBSOIL, CLAY, LUMPS, STUMPS, ROOTS, WEEDS, BERMUDA GRASS, LITTER, TOXIC SUBSTANCES, OR ANY OTHER MATERIAL WHICH MAY BE HARMFUL TO PLANT GROWTH OR HINDER GRADING, PLANTING, OR MAINTENANCE OPERATIONS. SHOULD ANY UNFORESEEN OR UNSUITABLE PLANTING CONDITIONS ARISE SUCH AS FAULTY SOIL DRAINAGE OR CHEMICAL RESIDUES, THEY SHOULD BE CALLED TO THE ATTENTION OF THE OWNER FOR ADJUSTMENT BEFORE PLANTING. THE PLANT SHALL BE SET PLUMB AND STRAIGHT AND SHALL BE STAKED AT THE TIME OF PLANTING. BACKFILL SHALL BE WELL WORKED ABOUT THE ROOTS AND SETTLED BY WATERING. PLANTS WILL BE PLANTED HIGHER THAN SURROUNDING GRADE. SHRUBS WILL BE 1 INCH HIGHER AND TREES WILL BE 3 INCHES HIGHER. REMOVE ROPE FROM AROUND TREE TRUNKS AND LAY BACK BURLAP FROM TOP OF B&B MATERIAL. NYLON OR VINYL ROPE AND/OR BURLAP WILL BE COMPLETELY REMOVED FROM ALL PLANT MATERIAL PRIOR TO PLANTING.

TRANSPLANTING TREES BY TREE MACHINES: TREES SHALL BE MOVED BY MACHINES THAT PROVIDE A MINIMUM BALL DIAMETER OF 12 INCHES PER 1 INCH OF TREE CALIPER. HOLES ARE TO BE DUG BY THE SAME SIZE MACHINE AS THE ONE TRANSPORTING THE PLANT. THE PLANT MATERIAL SHALL BE TRANSPLANTED IN APPROXIMATELY THE SAME GROWING CONDITION AS IT IS PRESENTLY GROWING, IN TERMS OF SOIL TYPE AND MOISTURE CONTENT. FERTILIZE AND GUY AS DESCRIBED IN THESE PLANS AND SPECIFICATIONS.

MAINTENANCE:
DEAD AND DYING TREES AND REPLACEMENTS.
THE APPLICANT SHALL REPLACE ANY TREES PLANTED ALONG THE FORESTED BUFFER THAT DIE WITHIN THREE (3) YEARS OF PLANTING. IF ANY TREES SHOWN ON THE APPROVED SITE PLAN TO BE PRESERVED OR PLANTED AS PART OF THE PERIMETER BUFFER BECOME DISEASED OR ARE DYING, THEN THE APPLICANT MAY REMOVE THOSE TREES. IF THE REMOVED TREES ARE PART OF THE SCREENING BUFFER AS SHOWN ON THE APPROVED LANDSCAPE/BUFFER PLAN, THEN THE APPLICANT SHALL REPLACE WITH SUCH NUMBER OF TREES AS ARE NECESSARY TO SATISFY THE SCREENING INTENT OF THE APPROVED LANDSCAPE/BUFFER PLAN. THE REPLACEMENT TREES MUST BE EQUIVALENT TO THAT SHOWN ON THE APPROVED PLAN.

PROTECTION:
THE APPLICANT SHALL BE RESPONSIBLE FOR AND EMPLOY REASONABLE EFFORTS FOR THE PROTECTION OF THE TOPS, TRUNKS AND ROOTS OF ALL EXISTING TREES, AS WELL AS OTHER VEGETATION ON THE SITE. PROTECTION DEVICES SHALL BE INSTALLED ALONG THE LIMITS OF CLEARING AND GRADING, PRIOR TO ANY CONSTRUCTION OCCURRING ON-SITE. SUCH PROTECTION SHALL BE MAINTAINED UNTIL ALL WORK IN THE VICINITY HAS BEEN COMPLETED, AND SHALL NOT BE REMOVED WITHOUT THE CONSENT OF THE ZONING ADMINISTRATOR.

TRANSPLANTING EXISTING TREES: HARDWOODS SHOULD BE TRANSPLANTED IN THE LATE FALL FOLLOWING THEIR LEAF DROP. EVERGREENS MAY BE TRANSPLANTED BEGINNING WITH THE FALL COOL-DOWN PERIOD (NORMALLY SEPTEMBER) AND MAY CONTINUE INTO SPRING PRIOR TO ELONGATION OF THE NEW GROWTH. PROPER DIGGING OF A TREE INCLUDES THE CONSERVATION OF AS MUCH OF THE ROOT SYSTEM AS POSSIBLE, PARTICULARLY THE FINE ROOTS. SOIL ADHERING TO THE ROOTS SHOULD BE DAMP WHEN TREE IS DUG, AND KEPT MOIST UNTIL PLANTING. THE SOIL (OR "ROOT") BALL SHOULD BE 12 INCHES IN DIAMETER FOR EACH INCH OF DIAMETER OF THE TRUNK. THE TREE SHOULD BE CAREFULLY EXCAVATED AND THE SOIL BALL WRAPPED IN BURLAP AND TIED WITH ROPE. SOIL AROUND BALLED AND BURLAPPED TREE ROOTS SHOULD BE DUG WITH THE TREE AND NOT JUST PACKED AROUND BARE ROOTS. BALLED AND BURLAPPED PLANT MATERIAL SHALL BE KEPT MOIST.

CULTIVATION: ALL TRENCHES AND SHRUB BEDS SHALL BE CULTIVATED, EDGED, AND MULCHED TO A DEPTH OF 3 INCHES WITH FINE SHREDDED HARDWOOD BARK. THE AREA AROUND ISOLATED PLANTS SHALL BE MULCHED TO AT LEAST A 6-INCH GREATER DIAMETER THAN THAT OF THE HOLE. PLANT BEDS ADJACENT TO BUILDINGS SHALL BE MULCHED TO THE BUILDING WALL.

MAINTENANCE: THE CONTRACTOR SHALL BE RESPONSIBLE DURING THE CONTRACT AND, UP TO THE TIME OF ACCEPTANCE, FOR KEEPING THE PLANTING AND WORK INCIDENTAL THERETO IN GOOD CONDITION, BY REPLANTING, PLANT REPLACEMENT, WATERING, WEEDING, CULTIVATING, PRUNING AND SPRAYING, STAKING, AND CLEANING UP, AND BY PERFORMING ALL OTHER NECESSARY OPERATIONS OF CARE FOR PROMOTION OF GOOD PLANT GROWTH, SO THAT ALL WORK IS IN SATISFACTORY CONDITION AT THE TIME OF ACCEPTANCE, AT NO ADDITIONAL COST TO THE OWNER.

FERTILIZER: FERTILIZER SHALL BE A SLOW-RELEASE TYPE CONTAINED IN POLYETHYLENE PERFORATED BAGS WITH MICROPORE HOLES FOR CONTROLLED FEEDING, SUCH AS "EASY GROW" AS MANUFACTURED BY SPECIALTY FERTILIZER, INC., BOX 355, SUFFERN, NEW YORK, 10901 OR APPROVED EQUAL. THE BAGS SHALL CONTAIN 1 OUNCE OF SOLUBLE FERTILIZER ANALYSIS 16-18-16 PER UNIT TO LAST FOR THREE YEARS AND SHALL BE APPLIED DURING PLANTING AS RECOMMENDED BY THE MANUFACTURER. IF FERTILIZER PACKETS ARE NOT USED, THE CONTRACTOR SHALL APPLY GRANULAR FERTILIZER TO THE SOIL MIX OF 10-6-6 ANALYSIS, 50% ORGANIC, AT THE FOLLOWING RATES:

TREE PITS:
2-3 LBS. PER CALIPER INCH

SHRUB BEDS:
3-5 LBS. PER 100 SQ. FT.

GROUND COVER:
2-3 LBS. PER 100 SQ.FT.

GROUND COVER: ALL AREAS OF GROUND COVER SHALL BE ROTOTILLED TO A DEPTH OF SIX INCHES. APPLY 2 INCHES OF ORGANIC MATERIAL AND ROTOTILL UNTIL THOROUGHLY MIXED. APPLY FERTILIZER AS STATED ABOVE.

LIGHTING NOTES

1. ALL FIXTURES TO BE MOUNTED AT 25' MOUNTING HEIGHT.
2. VERIFY THAT FIXTURES AND POLES MATCH AND ARE EQUIVOLENT TO THOSE IN THE EXISTING PARKING AREAS.
3. ENSURE COMPATIBILITY OF LIGHT FIXTURES, POLES AND BASES.
4. POLES WITHIN PARKING FIELDS SHALL BE POSITIONED PRECISELY AT THE JUNCTION OF THE MIDLINE OF THE PARKING ROW AND THE PARKING SPACE LINE.
5. VERIFY UTILITY LOCATIONS PRIOR TO CONSTRUCTION.

Handhole
A reinforced handhole with cover, grounding lug, and hardware is provided with each pole assembly.

Mounting Options
The pole may be specified with a single tenon mount for pole top mounting or side drilled pattern. For multiple fixtures, an adapter should be used. A removable pole cap is provided for poles specified with side drill luminaire mounting.

Finish Options
Carbon steel poles may be specified as hot-dip galvanized per ASTM A123 and/or finish painted with our standard Millerbond Wet Coat Finish. Multi-sided stainless steel poles may be specified as frost /rust resistant stainless steel shot blast) finished or finish painted with our standard Millerbond Wet Coat Finish. Round stainless steel poles must be finish painted with our standard Millerbond Wet Coat Finish.

Hardware
All hardware and fasteners are supplied with each pole assembly. All structural fasteners are galvanized high-strength (carbon steel) or 18-8 (stainless steel).

NOTES

1. DEPTH OF INLET (H) TO BE SHOWN ON PLANS, FOR DEPTH GREATER THAN 10' USE STANDARD DI-1A.
2. THE "H" DIMENSION SHOWN ON THE STANDARDS AND SPECIFIED ON THE PLANS WILL BE MEASURED FROM THE INVERT OF THE OUTFALL PIPE TO THE TOP OF THE STRUCTURE. PLAN "H" DIMENSIONS ARE APPROXIMATE ONLY FOR ESTIMATING PURPOSES AND THE ACTUAL DIMENSIONS SHALL BE DETERMINED BY THE CONTRACTOR FROM FIELD CONDITIONS.
3. WHEN SPECIFIED ON THE PLANS THE INVERT IS TO BE SHAPED IN ACCORDANCE WITH STANDARD IS-1. THE COST OF FURNISHING AND PLACING ALL MATERIALS INCIDENTAL TO THE SHAPING IS TO BE INCLUDED IN THE BID PRICE FOR THE STRUCTURE.
4. IN THE EVENT THE INVERT OF THE OUTFALL PIPE IS HIGHER THAN THE BOTTOM OF THE STRUCTURE, THE INVERT OF THE STRUCTURE SHALL BE SHAPED WITH CEMENT MORTAR TO PREVENT STANDING OR PONDING OF WATER IN THE STRUCTURE. THE COST OF FURNISHING AND PLACING ALL MATERIALS INCIDENTAL TO INLET SHAPING IS TO BE INCLUDED IN THE BID PRICE FOR THE STRUCTURE.
5. STEPS ARE TO BE PROVIDED WHEN H IS 4'-0" OR GREATER. FOR DETAILS SEE STANDARD ST-1.
6. THIS ITEM MAY BE PRECAST OR CAST-IN-PLACE.
7. #4 X 8" SMOOTH DOWELS AT APPROXIMATELY 12" C-C. TO BE PLACED IN ALL AREAS ADJACENT TO ABUTTING CONCRETE TO PREVENT SETTLEMENT. IN LIEU OF DOWELS A 2"X4" NOTCH MAY BE PROVIDED. SEE STANDARD T-09-3, 4 FOR ALTERNATE DESIGN.
